COMBINED COMPETITIVE (PRELIMINARY) EXAMINATION, 2013

Serial No.

MECHANICAL ENGINEERING
Code No. 14

Time Allowed: Two Hours

Maximum Marks: 300

INSTRUCTIONS

- 1. IMMEDIATELY AFTER THE COMMENCEMENT OF THE EXAMINATION, YOU SHOULD CHECK THAT THIS TEST BOOKLET DOES NOT HAVE ANY UNPRINTED OR TORN OR MISSING PAGES OR ITEMS, ETC. IF SO, GET IT REPLACED BY A COMPLETE TEST BOOKLET.
- 2. ENCODE CLEARLY THE TEST BOOKLET SERIES **A, B, C OR D** AS THE CASE MAY BE IN THE APPROPRIATE PLACE IN THE RESPONSE SHEET.
- You have to enter your Roll Number on this
 Test Booklet in the Box provided alongside.
 DO NOT write anything else on the Test Booklet.

Your Roll No.

- 4. This Booklet contains 120 items (questions). Each item comprises *four* responses (answers). You will select *one* response which you want to mark on the Response Sheet. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each item.
- 5. In case you find any discrepancy in this test booklet in any question(s) or the Responses, a written representation explaining the details of such alleged discrepancy, be submitted within three days, indicating the Question No(s) and the Test Booklet Series, in which the discrepancy is alleged. Representation not received within time shall not be entertained at all.
- 6. You have to mark all your responses ONLY on the separate Response Sheet provided. *See directions in the Response Sheet*.
- 7. All items carry equal marks. Attempt ALL items. Your total marks will depend only on the number of correct responses marked by you in the Response Sheet.
- 8. Before you proceed to mark in the Response Sheet the response to various items in the Test Booklet, you have to fill in some particulars in the Response Sheet as per instructions sent to you with your Admit Card and Instructions.
- 9. While writing Centre, Subject and Roll No. on the top of the Response Sheet in appropriate boxes use "ONLY BALL POINT PEN".
- 10. After you have completed filling in all your responses on the Response Sheet and the examination has concluded, you should hand over to the Invigilator only the Response Sheet. You are permitted to take away with you the Test Booklet.

DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE ASKED TO DO SO

ROUGH WORK

EIJ-50100-A

1.	If two forces of magnitude P, act at an angle θ , the	eir resu	ltant will be :	
	(A) $2P\cos\theta$	(B)	$2P\cos\theta/2$	
	(C) $2P \sin \theta$	(D)	$P\cos 2\theta$	
2.	In a statically determinate problem, the number of	non-tr	vial equilibrium equation	ons:
	(A) equals the numbers of unknowns	(B)	is less than number of	unknowns
	(C) is more than number of unknowns	(D)	cannot be determined	
3.	The number of independent scalar equations of eq	ιuilibriι	ım of a rigid body under	r concurrent force
	system is:			
	(A) 4	(B)		
	(C) 5	(D)	6	
4.	D'Alembert principle states that system of forces a with the inertia force of the body:	acting o	on a body is following ty	pe of equilibrium
	(A) static	(B)	dynamic	
	(C) both	(D)	none	
5.	 The law of conservation of mechanical energy is v (A) irrespective of the nature of force field (B) only in gravitational field (C) only if the total work done by the particle in (D) only if the forces is tangential to the trajector 	movin	g around in a closed tra	jectory
6.	In the impact problem the following conditions m (A) the total kinetic energy remains unchanged (B) the total linear momentum remains unchanged (C) the magnitude of the total linear momentum in the condition of the above	ed		t of restitution
7.	The displacement of a particle undergoing red $t^3 - 21t^2 + 60t$ meters. The acceleration of the part (A) -18 m/s^2 (C) 9 m/s^2	ticle, v (B)	_	•
8.	Two metallic blocks having masses in the ratio 2: plane starting from rest position. When the blocks have their kinetic energies in the ratio: (A) 2:3 (C) 3:2	reach (B)		
EIJ	-50100-A	3		[Turn over
		Ш		

9.	If a shaft made of ductile material is subjected to combined bending and twisting moments, calculation based on which one of the following theories would give the most conservative values?				
	(A) Maximum principle stress theory	(B)	Maximum shear stress theory		
	(C) Maximum strain energy theory	(D)	Maximum distortion energy theory		
10.	If the area, length and the stress to which a bar is su energy of the bar will be:	ıbjecı	ted be all doubled, then the elastic strain		
	(A) Doubled	(B)	Three times		
	(C) Four times	(D)	Sixteen times		
11.	If a cantilever beam of length l , the concentrated moment $P \times l$, the deflection will increase by :	l loac	d P at the end is replaced by a bending		
	(A) 1 time	` ′	1.5 times		
	(C) 1.25 times	(D)	2 times		
12. A single degree of freedom spring mass damper system has a spring of stiffness $k = 4$ mass $m = 10$ kg and a damper of damping constant $c = 240$ N-sec/m, its damped natural free will be:			<u> </u>		
	(A) 18 rad/sec	(B)	16 rad/sec		
	(C) 20 rad/sec	, ,	22 rad/sec		
13.	The ratio of maximum displacement of the forced v known as:	ibrat	ion to the deflection due to static force is		
	(A) Damping Factor	(B)	Damping Coefficient		
	(C) Logarithmic Decrement		Magnification Factor		
14.	Stress concentration in static loading is:				
	(A) Very serious in ductile material	(B)	Very serious in brittle material		
	(C) Less serious in brittle material	(D)	None of the above		
15.	If n links are connected at the same joint, the joint i	s equ	ivalent to:		
	(A) $(n-1)$ binary joints	(B)	(n-2) binary joints		
	(C) $(n-3)$ binary joints	(D)	(2n-1) binary joints		
16.	The mechanical advantage for a rigid link AB, wh (neglecting friction effect), is given by:	ose d	driving end is A whereas driven end is B		
	(A) V_A/V_B	(B)	$V_{_{ m B}}/V_{_{ m A}}$		
	$(C) V_B.V_A$	(D)	None of the above		
17.	If a mechanism has n links, then the number of insta		-		
	(A) n		n(n-1)/2		
	(C) n/2	(D)	(n-1)		

18.	If a constant velocity ratio of driving and driven shafts is required then the mechanism used is:					
	(A)	Ackermann gearing	(B)	Hooke's joint		
	(C)	Double Hooke's joint	(D)	Grass-Hopper mechanism		
19.	The	train value of a gear train is:				
	(A)	equal to velocity ratio	(B)	reciprocal of velocity ratio		
	(C)	always greater than unity	(D)	none of the above		
20.	Ina	clock mechanism, the gear train used to conne	ct mi	nute hand to hour hand, is:		
	(A)	Epicyclic gear train	(B)	Reverted gear train		
	(C)	Compound gear train	(D)	Simple gear train		
21.	The	maximum fluctuation of the energy is the:				
	(A)	sum of maximum and minimum energies				
	(B)	difference between the maximum and minimum	n ene	rgies		
	(C)	ratio of the maximum energy and minimum energy	ergy			
	(D)	ratio of mean resisting torque to the work don	ne per	cycle		
22.	radii will		e ene	ergy stored in the latter at the same speed		
	, ,	Four times the first one	` ′	Same at the first one		
	(C)	One fourth of the first one	(D)	One and half times the first one		
23.		a cycloidal tooth profile, pressure angle at (i) Co	omm	encement of engagement, (ii) Pitch point		
		(iii) End of engagement will be:	(D)	zoro movimum zoro		
	, ,	constant	, ,	zero, maximum, zero		
	(C)	maximum, zero, maximum	(D)	zero, zero, maximum		
24.		erial having highest cutting speed is:	(D)	D		
	` ′	Cast iron	` ′	Bronze		
	(C)	Aluminium	(D)	High carbon steel		
25.	Angle between the shear plane and work surface is known as:					
		lipangle		rake angle		
	(C)	cutting angle	(D)	shear angle		
26.		ling material used in cemented carbide tools is	:			
	, ,	Nickel	` ′	Cobalt		
	(C)	Chromium	(D)	Silicon		
EIJ	-5010	00-A	5 11	[Turn over		

27.	The usual ratio of forward and return stroke in shap (A) 2:1 (C) 2:3		1:2
28.	Tool life is most affected by: (A) cutting speed (C) feed and depth		tool geometry microstructure of material being cut
29.	Poor surface finish results due to: (A) heavy depth of cut (C) high cutting speed		low cutting speed coarse feed
30.	Abrasive used for grinding ceramics and tungsten c	arbid	le is:
	(A) Diamond	(B)	Alumina
	(C) Silicon carbide	(D)	Boron carbide
31.	A twist drill is a: (A) side cutting tool (C) end cutting tool		front cutting tool none of these
	(C) end cutting tool	(D)	none of these
32.	Gantt chart is used for:		
	(A) inventory control	(B)	material handling
	(C) production schedule		machine repair schedules
33.	The main object of scientific layout is:		
	(A) to produce better quality of product	` ′	to utilise maximum floor area
	(C) to minimise production delays	(D)	all of these
3/1	In value engineering, the term value refers to:		
54.	(A) manufacturing cost of the product	(B)	selling price of the product
	(C) total cost of the product		utility of the product
35.	In inventory control theory, the economic order qua		
	(A) average level of inventory		
	(B) optimum lot size		
	(C) capacity of a warehouse		
	(D) lost size corresponding to break-even analysis		
36.	Production cost refers to prime cost plus: (A) factory overheads		
	(B) factory and administration overheads		
	(C) factory, administration and sales overheads		
	(D) factory, administration, sales overheads and pr	ofit	

37.	A systematic job improvement sequence will consist (A) motion study (C) job enrichment	(B)	time study all of these
38.	Military type of organisation is known as: (A) line organisation(C) line and staff organisation		functional organisation line, staff and functional organisation
39.	The procedure of modifying work content to give involving employees in planning, organisation and (A) job enlargement	contr	
	(C) job rotation	, ,	job evaluation
40.	Fixed position layout is also known as: (A) analytical layout (C) static product layout	, ,	synthetic layout none of these
		(D)	none of these
41.	Slag inclusion in casting is a: (A) surface defect	(B)	internal defect
	(C) superficial defect	(D)	none of the above
42.	The most suitable material for die casting is:		
	(A) Steel(C) Nickel	` ′	Cast Iron Copper
		(D)	Соррсі
43.	Draft on pattern for casting is: (A) shrinkage allowance		
	(B) identification number marked on it		
	(C) taper to facilitate its removal from mould(D) for machining allowance		
44.	Sprue in casting refers to: (A) gate	(B)	runner
	(C) riser	` /	vertical passage
45.	Ornaments are cast by:		
	(A) die casting		continuous casting
	(C) pressed	(D)	centrifugal casting
46.	The aim of value engineering is to:		
	(A) find the depreciation value of a machine(B) determine the selling price of a product		
	(C) minimize the cost without change in quality of	the p	roduct
	(D) all of the above	-	

EIJ-50100-A 7 [Turn over

17.	In time study, the rating factor is applied to determine (A) standard time of a job (C) fixation of incentive rate	(B)	merit rating of the worker normal time of a worker
1 8.	CPM is the: (A) time oriented technique (C) activity oriented technique		event oriented technique target oriented technique
19.	Simplex method is the method used for: (A) value analysis		network analysis
	(C) linear programming	(D)	queuing theory
50.	Which of the following wage incentive plans guarar paid for the fixed percentage of time saved?		_
	(A) Halsey plan		Gantt plan
	(C) Rowan plan	(D)	Emerson's efficiency plan
51.	Job evaluation is the method of determining the : (A) relative values of a job	(B)	worker's performance on a job
	(C) worth of the machine		value of overall production
52.	 The routing function in a production system design (A) manpower utilisation (B) quality assurance of the product (C) machine utilisation (D) optimising material flow through the plant 	is coi	ncerned with :
53.	Direct expenses include:		
	(A) factory expenses	(B)	selling expenses
	(C) administrative expenses	(D)	none of these
54.	String diagram is used: (A) for checking the relative values of various layo (B) when a group of workers are working at a pla (C) where processes require the operator to be m (D) all of the above	ce	from one work place to another
55.	Which of the following types of layout is suitable fo	r auto	omobile manufacturing concern?
	(A) product layout		process layout
	(C) fixed position layout	(D)	combination layout

56.	Queuing theory is associated with:				
	(A) inventory	(B)	sales		
	(C) waiting time	(D)	production time		
	DEDET :				
57.	PERT requires:	~.			
	(A) single time estimate	` '	double time estimate		
	(C) triple time estimate	(D)	none of these		
58.	Which of the following statements is correct?				
	(A) A-B-C analysis is based on Pareto's principle	:			
	(B) Simulation can be used for inventory control				
	(C) Economic order quantity formula ignores varia	ation	s in demand pattern		
	(D) all of the above		1		
59.	In break even analysis, total cost consists of:				
	(A) fixed cost + sales revenue	` ′	variable cost + sales revenue		
	(C) fixed cost + variable cost	(D)	fixed cost + variable cost + profit		
60.	In order to avoid excessive multiplication of facilities	es, th	e layout preferred is:		
	(A) product layout	(B)	process layout		
	(C) group layout	(D)	static layout		
61	Which of the following can be regarded as gas so	that	gas law could be applicable within the		
01.	commonly encountered temperature limits?	tiiat	gus iuw courd be appricable within the		
	(A) O ₂ , N ₂ , steam, CO ₂	(B)	O ₂ , N ₂ , water vapour		
	(C) SO ₂ , NH ₂ , CO ₂ , moisture		O_2 , N_2 , water vapour O_2 , N_2 , H_2 , air		
	(\mathcal{C}) \mathcal{SO}_2 , \mathcal{TM}_3 , \mathcal{SO}_2 , \mathcal{MS}_3	(D)	0 ₂ , 11 ₂ , 11 ₂ , an		
62.	A closed system is one in which:				
	(A) mass does not cross boundaries of the system	, tho	ugh energy may do so		
	(B) mass crosses the boundary but not the energy				
	(C) neither mass nor energy crosses the boundaries of the system				
	(D) both energy and mass cross the boundaries of	the s	system		
63.	Absolute zero pressure will occur:				
	(A) at sea level				
	(B) at the centre of the earth				
	(C) when molecular momentum of the system bec	omes	s zero		
	(D) under vacuum conditions	J-1101			
	(2) mad radam conditions				

EIJ-50100-A

[Turn over

	Intensive property of a system is one whose value: (A) depends on the mass of the system, like volume (B) does not depend on the mass of the system, like temperature, pressure, etc. (C) is not dependent on the path followed but on the state (D) is dependent on the path followed and not on the state			
65.	The equation $\left(p + \frac{a}{v^2}\right)(v - b) = R$ is known as:			
	(A) Real gas equation(C) van der Waal's equation		Maxwell's equation Avogadro's equation	
66.	The basis for measuring thermodynamic property (A) zeroth law of thermodynamics (C) second law of thermodynamics	(B)	nperature is given by : first law of thermodynamics third law of thermodynamics	
67.	If a fluid expands suddenly into vacuum through an is called:	orific	ce of large dimension, then such a process	
	(A) free expansion		hyperbolic expansion	
	(C) adiabatic expansion	(D)	parabolic expansion	
68	Steam flow through a nozzle is considered as:			
00.	(A) constant volume flow	(B)	constant pressure flow	
	(C) adiabatic flow		isothermal flow	
60	The following evals is used for air croft refrigeration	n .		
09.	The following cycle is used for air craft refrigeration (A) Brayton cycle		Joule cycle	
	(C) Carnot cycle		Reversed-Brayton cycle	
	(0)	(-)		
70.	An ideal gas at 27°C is heated at constant pressu temperature of gas then will be:	ıre til	l its volume becomes three times. The	
	(A) 81 °C	(B)	900 ℃	
	(C) 627 °C	(D)	927 ℃	
71.	When two gases suddenly mix up with each other t (A) decrease		esultant entropy of the system will : increase	
	(C) remain same	` /	attain negative value	
	(C) Terriain same	(D)	attain negative value	
72.	If air is compressed adiabatically from atmospheric condition in a cylinder having compression ratio of 6, then pressure at the end of compression shall be: (A) 6 ata (B) less than 6 ata (C) more than 6 ata (D) less or more than 6 ata depending on temperature at the end of compression			
	7 0400 A	4.0		

73.	The air-fuel ratio of the petrol engine is controlled by (A) fuel pump (C) injector	(B)	governor carburettor
74.	Engine pistons are usually made of aluminum alloy (A) is lighter (C) absorbs shocks	(B)	use it: wears less is stronger
75.	For maximum power generation, the air fuel ratio f (A) 9:1 (C) 15:1	(B)	trol engine vehicles is of the order of: 12:1 18:1
76.	In a naturally aspirated diesel engine, the air is supp (A) a supercharger (C) a vacuum chamber	(B)	by : a centrifugal blower an injection tube
77.	Ignition quality of petrol is expressed by : (A) octane number (C) calorific value	` /	cetane number self ignition temperature
78.	Ignition timing of a multi cylinder petrol engine can (A) rotating the crank (C) adjusting ignition coil position	(B)	djusted by : adjusting the spark plug gap rotating the distributor
79.	The elements of most concern in regard to pollution (A) CO and CO ₂ (C) CO ₂ and hydrocarbons	(B)	sed by engines are : CO and hydrocarbons hot products of combustion
80.	Water boils when its vapour pressure: (A) equals that of the surroundings (B) equals 760 mm of mercury (C) equals to atmospheric pressure (D) equals the pressure of water in the container		
81.	Which of the following gases has the highest calorif (A) producer gas (C) coke oven gas	(B)	lue ? coal gas blast furnace gas
82.	The diameter of Cornish boiler is of the order of: (A) 1-2 m (C) 2-3 m		1.5-2.5 m 2.5-3.5 m

EIJ-50100-A 11 [Turn over

83.	Which of the following is fire tube boiler? (A) locomotive boiler (C) Stirling boiler	(B) Babcock and Wilcox boiler(D) all of the above
84.	Which device is used in thermal power plants to r (A) induced draft fan (C) chimney	educe level of pollution ? (B) precipitator (D) pulveriser
85.	De-aeration of feed water is carried out because i (A) cavitation of boiler feed pumps (C) heat transfer coefficient	t reduces: (B) corrosion caused by oxygen (D) pH value of water
86.	As a result of blade friction the relative velocity relative velocity is: (A) nearly same (C) 10-15% less	at outlet of impulse turbine compared to inlet (B) 2% less (D) 30% less
87.	Commonly used method of governing in steam tur (A) throttle governing (C) bypass governing	bines is by : (B) nozzle control governing (D) hydraulic governing
88.	Reheat cycle in steam power plant is used to: (A) prevent excess of 10-12% moisture content i (B) utilize heat of the flue gases (C) increase plant efficiency (D) improve condenser performance	n last stages of turbine
89.	For a convergent divergent nozzle, the mass flow inlet pressures: (A) is less than critical pressure ratio	rate remains constant if the ratio of exit and (B) is equal to the critical pressure ratio
90.	(C) is more than critical pressure ratioThe maximum velocity attainable at the throat of a(A) supersonic velocity	(D) is infinitysteam nozzle is :(B) slightly less than sonic velocity
91.	(C) sonic velocity The effect of friction in nozzle is to:	(D) slightly more than sonic velocity
-	 (A) keep dryness fraction constant (B) increase dryness fraction (C) decrease dryness fraction (D) first increase dryness fraction up to a certain 	limit and then decrease

92.	(A)	super saturation of steam results in slight: increase in entropy		increase of final dryness fraction
	(C)	increase of discharge	(D)	all of the above
93.	The	most efficient method of compressing air is to	comp	ress it:
	(A)	isothermally	(B)	adiabatically
	(C)	isentropically	(D)	as per law $PV^n = C$
94.	Aero	oplanes employ following type of compressor:		
	. ,	radial flow	` ′	axial flow
	(C)	centrifugal	(D)	combination of above
95.	Rati	o of indicated horse power and brake horse po		
		mechanical efficiency		volumetric efficiency
	(C)	isothermal efficiency	(D)	relative efficiency
96.	Acc	ompressor at high altitude will draw :		
		more power		less power
	(C)	same power	(D)	none of the above
97.	The	rmal conductivity of solid metals with rise is tem	perat	ture normally :
	. ,	increases	` ′	decreases
	(C)	remains constant	(D)	unpredictable
98.		t is transferred by all three modes, viz, conducti	on, c	onvection and radiation in:
		electric heater	` ′	steam condenser
	(C)	refrigerator condenser coils	(D)	boiler
99.		o of heat flow q_1/q_2 from two walls of same the $q_1 = 2k_2$ will be:	iickn	ess having their thermal conductivities
	(A)		(B)	1
	(C)	2	(D)	4
100.	In h	eat exchangers, degree of approach is defined a	as the	difference between temperatures of:
	(A)	cold water inlet and outlet	` '	hot medium inlet and outlet
	(C)	hot medium outlet cold water inlet	(D)	hot medium outlet cold water outlet
101.	The	value of Prandlt number for air is around:		
	(A)		(B)	
	(C)	0.7	(D)	1.7
102.		energy distribution of an ideal reflector at higher		
		shorter wavelength		longer wavelength
	(C)	remains same at all wavelengths	(D)	wavelength has nothing to do with it
EIJ-	5010	00-A	13	[Turn over

(A)	heat transfer equation $\nabla^2 T=0$ is known as : Laplace equation Fourier equation		General equation of heat transfer Poisson's equation
(A)	rmal radiation extends over the range of : 0.01 to 0.1 μ 100 to 250 μ		$0.1 \text{ to } 100 \mu$ $250 \text{ to } 1000 \mu$
(A)	boiling point of ammonia is: 0 °C -33.3 °C	, ,	−50 °C 33.3 °C
(A)	e ton of refrigeration corresponds to : 210 kJ/min 335 kJ/min		210 kJ/h 335 kJ/h
(A)	refrigerant for a refrigerator should have : high sensible heat high latent heat		high total heat low latent heat
(A)	rigeration in aeroplanes usually employs the follo CO_2 Freon-22	(B)	g refrigerant : Freon-11 Air
(A) (B) (C)	flooded type evaporator of a refrigerator, an accollect liquid refrigerant and prevent it from go detect liquid in vapour superheat the vapour collect vapours		
(A)	en two refrigerants are mixed in the proper ratio synthetic refrigerant high pressure refrigerant	(B)	mixture forms a third refrigerant called : auxiliary refrigerant an azeotrope
111. The (A)	most suitable refrigerant for a commercial ice p brine Freon	lant i	is: NH ₃
(A) (B) (C)	v point temperature is constant as long as there no change in moisture content of the air no change in volume of air no change in dry bulb and wet bulb temperatu no change in relative and specific humidity of a	re	

 $113. \ The comfort conditions in air conditioning are :$

(A)	(A) 22 °C dry bulb temperature and 60% relative humidity		
(B)	(B) 25 °C dry bulb temperature and 100% relative humidity		
	(C) 20° C dry bulb temperature and 75% relative humidity		
(D)	15°C bulb temperature and 80% relative hum	idity	
114. Air is normally dehumidified by:			
(A)	injecting water	(B)	passing steam
(C)	heating	(D)	cooling
115. A fluid in equilibrium cannot sustain:			
(A)	tensile stress	(B)	compressive stress
(C)	shear stress	(D)	bending stress
116. Which of the following instrument can be used for measuring speed of an aeroplane?			
(A)	orifice plate	(B)	hot wire anemometer
(C)	rotameter	(D)	pitot tube
117. Euler's dimensionless number relates the following:			
(A)	Inertial force and gravity	(B)	Viscous force and Inertial force
(C)	Pressure force and Inertial force	(D)	Pressure force and viscous force
118. Power transmitted through a pipe is maximum when the loss of head due to friction is:			
(A)	one-half of the total head supplied	(B)	one-third of the total head supplied
(C)	one-fourth of the total head supplied	(D)	zero
119. The efficiency of a centrifugal pump is maximum when its blades are:			
(A)	straight	(B)	bent forward
(C)	bent backward	(D)	bent forward first and then backward
120. In axial flow fans and turbines, fluid enters and leaves as follows:			
(A)	radially, axially	(B)	axially, radially
	axially, axially	(D)	radially, radially

ROUGH WORK
