

DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE TOLD TO DO SO

T.B.C. : RSPV-T-TLEE

Test Booklet Series

Serial No. 1007603

TEST BOOKLET

A

PAPER—II

(Electronics and Telecommunication Engineering)

Time Allowed : Three Hours

Maximum Marks : 300

INSTRUCTIONS

1. IMMEDIATELY AFTER THE COMMENCEMENT OF THE EXAMINATION, YOU SHOULD CHECK THAT THIS TEST BOOKLET *DOES NOT* HAVE ANY UNPRINTED OR TORN OR MISSING PAGES OR ITEMS, ETC. IF SO, GET IT REPLACED BY A COMPLETE TEST BOOKLET.
2. Please note that it is the candidate's responsibility to encode and fill in the Roll Number and Test Booklet Series A, B, C or D carefully and without any omission or discrepancy at the appropriate places in the OMR Answer Sheet. Any omission/discrepancy will render the Answer Sheet liable for rejection.
3. You have to enter your Roll Number on the Test Booklet in the Box provided alongside. *DO NOT* write anything else on the Test Booklet.
4. This Test Booklet contains 150 items (questions). Each item comprises four responses (answers). You will select the response which you want to mark on the Answer Sheet. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose *ONLY ONE* response for each item.
5. You have to mark all your responses *ONLY* on the separate Answer Sheet provided. See directions in the Answer Sheet.
6. All items carry equal marks.
7. Before you proceed to mark in the Answer Sheet the response to various items in the Test Booklet, you have to fill in some particulars in the Answer Sheet as per instructions sent to you with your Admission Certificate.
8. After you have completed filling in all your responses on the Answer Sheet and the examination has concluded, you should hand over to the Invigilator *only the Answer Sheet*. You are permitted to take away with you the Test Booklet.
9. Sheets for rough work are appended in the Test Booklet at the end.
10. **Penalty for wrong answers :**
THERE WILL BE PENALTY FOR WRONG ANSWERS MARKED BY A CANDIDATE.
 - (i) There are four alternatives for the answer to every question. For each question for which a wrong answer has been given by the candidate, **one-third** of the marks assigned to that question will be deducted as penalty.
 - (ii) If a candidate gives more than one answer, it will be treated as a **wrong answer** even if one of the given answers happens to be correct and there will be same penalty as above to that question.
 - (iii) If a question is left blank, i.e., no answer is given by the candidate, there will be **no penalty** for that question.

1. Consider the following statements regarding noise :

1. The shot noise has a uniform spectral density like thermal noise.
2. For the amplifying devices, the shot noise is inversely proportional to the output current.
3. The partition noise in a diode will be higher than that in a transistor.

Which of the above statements is/are **not** correct?

- (a) 1 only
- (b) 2 only
- (c) 2 and 3
- (d) 1 and 2

2. Consider the following statements regarding white noise :

1. The white noise contains all the frequency components in equal proportion.
2. Johnson noise is an example of white noise.
3. The white noise has a Gaussian distribution.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

3. Consider the following statements regarding random variables :

1. A discrete random variable will have a countable number of distinct values.
2. Continuous random variable is defined for the system which generates a finite number of outcomes within a finite period of time.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

4. Consider the following statements regarding modulation :

1. Analog modulation requires lower bandwidth than that for the digital modulation methods.
2. Separation of signal from noise is not possible in analog modulation. Therefore, repeaters can be used.
3. FDM is used for multiplexing in analog modulation.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

5. Consider the following statements regarding modulation :

1. In low-level modulation, linear amplifiers are required in order to avoid any waveform distortion.
2. High-efficiency class B amplifiers are used in high-level modulation.
3. In high level, modulation takes place in the last RF amplifier stage of the transmitter.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

6. Consider the following statements regarding detectors :

1. Synchronous detectors suffer with diagonal clipping errors.
2. Operating principle of envelope detector is to rectify the incoming signal and pass it through an LPF.
3. Envelope detector is used for DSB-SC.

Which of the above statements is/are **not** correct?

- (a) 1 only
- (b) 2 only
- (c) 1 and 3
- (d) 2 and 3

7. Consider the following statements regarding sideband suppression methods :

1. Frequency discrimination method can be used to generate SSB at higher frequency.
2. Up conversion is needed in phase discrimination method.
3. In phase discrimination method, unwanted sideband is cancelled out by shifting AF and RF signals to balance modulator by 90° .

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

8. Consider the following statements regarding various pulse analog modulation techniques :

1. Noise interference is minimum in PAM as compared to PWM and PPM.
2. The instantaneous power of the transmitter remains constant in PWM.
3. In PAM, the bandwidth of the transmission channel depends on width of the pulse.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

9. Consider the following statements regarding Frequency Division Multiplexing (FDM) :

1. FDM needs synchronization between its transmitter and receiver for proper operation.
2. In FDM, due to slow narrow band fading only a single channel gets affected.
3. All the FDM channels get affected due to wideband fading.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

10. Consider the following statements regarding modulations :

1. Only one bit is used to encode one sample in Adaptive Delta Modulation (ADM).
2. In Differential Pulse Code Modulation (DPCM), the fixed number of levels is used.
3. In ADM, quantization noise and slope overload distortion are present.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

11. Consider the following statements :

1. The signal-to-noise ratio of Pulse Code Modulation (PCM) remains almost constant with companding.
2. Analog to digital converter is not required in Delta Modulation (DM).
3. Because of variable step size, the dynamic range of Adaptive Delta Modulation (ADM) is wider than simple Delta Modulation.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

12. Consider the following statements regarding Binary ASK, Binary FSK and Binary PSK :

1. The performance of Binary FSK in presence of noise is better than that of Binary ASK and Binary PSK.
2. Binary PSK systems are more complex than that for Binary ASK and Binary FSK.
3. Binary ASK supports the data rate up to 1200 bits/second.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

13. Consider the following statements regarding unit impulse signal :

1. The discrete-time unit impulse is the first difference of the discrete-time step signal.
2. The amplitude of unit impulse signal is equal to '1' at $n = 1$.
3. The continuous-time unit impulse can be obtained as first derivative of the continuous-time unit step.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

14. Consider the following statements regarding system properties :

1. A system is a causal, if the output at any time depends on values of the input at only the present and past times. Such a system is often referred to as being non-anticipative.
2. Summer is an example of a discrete-time system with memory.
3. A system is said to be memoryless, if its output for each value of the independent variable at a given time is dependent on the input at only that same time.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

15. Consider the following statements regarding Laplace transform :

1. The ROC of $X(s)$ consists of strips parallel to the $j\omega$ -axis in the s -plane.
2. For rational Laplace transforms, the ROC does not contain any poles.
3. If $x(t)$ is of finite duration and is absolutely integrable, then the ROC is the entire s -plane.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

16. Consider the following statements regarding Mason's gain formula

$$T = \sum_{k=1}^k \frac{P_k \Delta_k}{\Delta}$$

1. P_k is the forward path transmittance of k th path from a specified input node to an output node.
2. Δ is the graph determinant which involves closed-loop transmittances and mutual interactions between non-touching loops.
3. The path factor Δ_k for the k th path is equal to the value of the graph determinant of a signal flow graph which exists after erasing the k th path from the graph.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

17. Consider the following statements regarding root locus plot :

1. The root locus starts ($K = 0$) from the open-loop poles and terminates ($K = \infty$) on the finite open-loop zeros only.
2. For higher values of K , the root locus can be approximated by asymptotic lines and these asymptotic lines intersect at a point on the real axis.

3. If the root locus intersects the imaginary axis, then the points of intersection are conjugate.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

18. Consider the following statements regarding stability in terms of characteristic equation of a control system :

1. If any oscillations set up in a system in consequence to application of an input are damped out with respect to time, the system is said to be stable.
2. If the magnitude of the oscillations is sustained, the system is unstable.
3. For a stable system, there should be no change of sign in the first column of Routh array formed from the coefficients of the characteristic equation expressed in polynomial form.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

19. Consider the following statements regarding frequency domain analysis of control system :

1. Gain margin is used to indicate the proximity of the intersection of the negative real axis made by the Nyquist (polar) plot of $G(j\omega)H(j\omega)$ to the $(-1 + j0)$ point.
2. Phase crossover frequency is the point in the $G(j\omega)$ plane at which the Nyquist $G(j\omega)H(j\omega)$ plot intersects the positive real axis.
3. Gain margin is the amount of gain in decibels that is allowed to be increased in the loop before the closed-loop system reaches instability.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

20. Consider the following statements regarding principles of control systems :

1. In control system, controlling variable is the excitation applied to a control system from an external source. It is also a motivating input signal to the system, which is independent of the output of the system.
2. One of the important features of feedback is reduced sensitivity of the ratio of the output to input to variations in system characteristics.
3. In the system, the actuating signal is the difference between the reference input and feedback signal.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

21. The steady-state errors for type 0 and type 1 systems for the parabolic input are, respectively

- (a) 0 and 0
- (b) 0 and $1/K$
- (c) $1/K$ and ∞
- (d) ∞ and ∞

22. Consider the following statements regarding feedback compensation :

1. The design procedure for a cascade compensator is more direct than those for a feedback compensator.
2. A faster response can be achieved by the use of parallel compensation.
3. The degree of accuracy and stability of a control system can be improved by the use of a series compensator.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

23. The stability limit of the servo-mechanism having open-loop transfer function $G(s)H(s) = \frac{K_a(2 + sT_1)}{s^2(1 + sT_2)}$ is

- (a) $T_1 > T_2$
- (b) $T_1 > (3/2)T_2$
- (c) $T_1 > 2T_2$
- (d) $T_2 > (1/2)T_1$

24. How many number of roots are there on the right half of the s -plane for the system whose characteristic equation is given below?

$$s^6 + s^5 - 2s^4 - 3s^3 - 7s^2 - 4s - 4 = 0$$

- (a) 0
(b) 1
(c) 2
(d) 3

25. Consider the following statements regarding time response analysis of control system :

1. In proportional control, the actuating signal for the control action in a control system is proportional to the difference between the reference input signal and the feedback signal obtained from the output.
2. The sluggish overdamped response of a control system can be made faster by increasing forward path gain of the system.
3. Without sacrificing the steady-state accuracy, the maximum overshoot can be reduced to same extent by modifying the actuating signal.

Which of the above statements are correct?

- (a) 1 and 2 only
(b) 1 and 3 only
(c) 2 and 3 only
(d) 1, 2 and 3

26. The design of combinational circuits starts from the verbal outline of the problem and ends in a logic circuit diagram. The procedure involves the following steps :

1. The problem is stated, and the input and output variables are assigned letter symbols.

2. The truth table that defines the relationship between inputs and outputs is derived.
3. The simplified Boolean functions for each output are obtained.
4. The logic diagram is drawn.

Which of the above steps are correct?

- (a) 1 and 3 only
(b) 1, 2 and 4 only
(c) 1, 3 and 4 only
(d) 1, 2, 3 and 4

27. In a 64-word stack, the stack pointer contains how many bits?

- (a) 6 bits
(b) 64 bits
(c) 8 bits
(d) 16 bits

28. For the simple arithmetic expression $(A + B) * [C * (D + E) + F]$, the expression can be written in reverse Polish notation as

- (a) $AB + DE * C + F + *$
(b) $A * B + D * E + C + F *$
(c) $AB + DE + C * F + *$
(d) $A + B * D + E + C * F$

29. In which one of the following addressing modes, the effective address is equal to the address part of the instruction?

- (a) Implied Mode
(b) Direct Address Mode
(c) Immediate Mode
(d) Register Indirect Mode

30. In an 8-bit ALU, let $A = 11110000$ and $B = 00010100$. After performing $A - B$, the compare instruction updates the status bits as

- (a) $C = 1, S = 1, V = 0, Z = 0$
(b) $C = 0, S = 0, V = 1, Z = 1$
(c) $C = 1, S = 1, V = 1, Z = 1$
(d) $C = 0, S = 0, V = 1, Z = 0$

31. The interrupts such as register overflow, attempt to divide by zero, an invalid operation code, stack overflow and protection violation are classified as

- (a) external interrupts
- (b) internal interrupts
- (c) software interrupts
- (d) hybrid interrupts

32. Which of the following statements are correct with respect to CISC processor?

1. It provides direct manipulation of operands residing in memory.
2. It has instructions that use only processor registers, the availability of other modes of operations tend to simplify high-level language compilation.
3. If more instructions and addressing modes are incorporated into a computer, the more hardware logic is needed to implement and support them, and this may cause the computations to slow down.

Select the correct answer using the code given below.

- (a) 1 and 2 only
- (b) 2 and 3 only
- (c) 1, 2 and 3
- (d) 1 and 3 only

33. Which one of the following is a technique of decomposing a sequential process into sub-operations, with each sub-process being executed in a special dedicated segment that operates concurrently with all other segments?

- (a) Pipeline processing
- (b) Vector processing
- (c) Scalar processing
- (d) Array processing

34. Which type of procedure is employed in which some computers give the responsibility for solving data conflicts problem to the compiler that translates the high-level programming language into a machine language program?

- (a) Hardware interlock
- (b) Operand forwarding
- (c) Branch target buffer
- (d) Delayed load

35. In an asynchronous data transfer, a unit receiving the data item responds with another control signal to acknowledge receipt of the data. This type of agreement between two independent units is referred to as

- (a) timing diagram
- (b) strobe
- (c) handshaking
- (d) activity diagram

36. Which of the following rules are correct, when a transmitted character is detected by the receiver from knowledge of the transmission?

1. When a character is not being sent, the line is kept in the 1-state.
2. The initiation of a character transmission is detected from the start bit, which is always 0.
3. The character bits always follow the start bit.
4. After the last bit of the character is transmitted, a stop bit is detected when the line returns to the 1-state for at least one bit time.

Select the correct answer using the code given below.

- (a) 1 and 2 only
- (b) 2 and 3 only
- (c) 1, 3 and 4 only
- (d) 1, 2, 3 and 4

37. In the serial transmission of a terminal whose transfer rate is 10 characters per second and each transmitted character consists of a start bit, eight information bits and two stop bits, for a total of 11 bits, the approximate baud rate is

- (a) 110 baud
- (b) 11 baud
- (c) 210 baud
- (d) 10 baud

38. Consider the following statements regarding electromagnetic fields and waves :

1. An incompressible fluid of non-zero value of divergence at a point X represents the rate at which the fluid is being gained or removed at point X .
2. Twice the velocity field (v) at any instant of time equals the curl of the angular velocity of rotation (ω).
3. A field which is not irrotational is sometimes called a vortex field.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

39. If vector \vec{A} in spherical coordinate system is defined as $\vec{A} = A_r \mathbf{a}_r + A_\theta \mathbf{a}_\theta + A_\phi \mathbf{a}_\phi$, then the curl of \vec{A} in \mathbf{a}_r direction is

(a) $\frac{1}{r} \left[\frac{\partial}{\partial r} (A_\theta r \sin \theta) - \frac{\partial A_\phi}{\partial \theta} \right]$

(b) $\frac{1}{r} \left[\frac{1}{\sin \theta} \frac{\partial}{\partial r} (A_r \sin \theta) - \frac{\partial A_\theta}{\partial \phi} \right]$

(c) $\frac{1}{r \sin \theta} \left[\frac{\partial}{\partial \theta} (A_\phi \sin \theta) - \frac{\partial A_\theta}{\partial \phi} \right]$

(d) $\frac{1}{r \sin \theta} \left[\frac{\partial}{\partial \theta} (A_\theta \sin \theta) - \frac{\partial A_\phi}{\partial \phi} \right]$

40. Consider the following statements regarding Maxwell's equations :

1. The total electric flux density or total electric displacement through the surface enclosing a volume v is equal to the total charge within the volume.
2. Net electric flux emerging through any closed surface is zero.
3. The magnetomotive force around a closed path is equal to the time derivative of the magnetic flux density or magnetic displacement through any surface bounded by the surface.

Which of the above statements are *not* correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

41. Consider the following statements regarding Maxwell's equations :

1. When the displacement current is very much greater than the conduction current, the medium behaves like a dielectric.
2. For good conductors, σ and ϵ are independent of frequency but for most of the dielectrics, the constants σ and ϵ are functions of frequency. Under these circumstances, the ratio $\frac{\sigma}{\omega \epsilon}$ is called as the frequency factor of the dielectrics.
3. The term $\frac{\sigma}{\omega \epsilon}$ is also sometimes referred to the loss tangent.

Which of the above statements are correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

42. Consider the following statements regarding electromagnetism :

1. Intrinsic resistance is a function of frequency and it is less than that for a perfect dielectric.
2. An increase in the frequency or loss in the dielectric results in the lowering of intrinsic resistance.
3. In high-frequency case, the skin depth represents the depth at which the electric intensity is 0.707 of its surface value.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

43. The depth of penetration may be defined as that depth in which the wave has been attenuated by

- (a) 33% approximately of its initial value
- (b) 37% approximately of its initial value
- (c) 67% approximately of its initial value
- (d) 73% approximately of its initial value

44. The planes $z = 0$ and $z = 4$ carry currents $K = -10a_x$ A/m and $K = 10a_x$ A/m, respectively. The value of H at $(0, -3, 10)$ is

- (a) 0 A/m
- (b) $5a_z$ A/m
- (c) $10a_z$ A/m
- (d) $10a_y$ A/m

45. Consider the following statements regarding transmission lines :

1. In single-stub matching, the combination of stub and line presents a conductance which is equal to twice of the characteristic conductance of the line.
2. Single-stub matching is useful for all frequencies because the position of the stub can be varied with the variation in frequency.
3. Single-stub matching system is a narrowband system.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

Download **FREE UPSC E-BOOKS**

46. A low-loss transmission line of 50 ohms characteristic impedance is connected to a load of 100 ohms. The voltage reflection coefficient and the standing wave ratio are, respectively

- (a) 1/2 and 3
- (b) 3 and 1/2
- (c) 1/3 and 2
- (d) 1/3 and 3

47. A dissipation-less transmission line whose characteristic impedance is 200 ohms is connected to a load of $(100 + j100)$ ohms. The frequency is 300 MHz. If the length of the line is 25 cm, then the input impedance of the line is

- (a) 141.44 ohms
- (b) 282.80 ohms
- (c) 424.26 ohms
- (d) 565.68 ohms

48. Consider the following statements regarding waveguides :

1. The phase velocity is defined as the velocity of propagation of equiphase surface along the guide.
2. Group velocity is defined as the velocity with which the group of the waves as a whole propagates.
3. Group velocity is always more than free space velocity.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

49. Consider the following statements regarding modes of propagation of electromagnetic waves :

1. The impedance value for TM_{mn} modes is always less than 376.8 ohms.
2. For the TE_{mn} modes in a rectangular waveguide, m and n denote the number of half sinusoids in the electric field distribution along the long and short sides, respectively of the guide.
3. TM_{0n} modes cannot exist in rectangular waveguides.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

50. Consider the following statements regarding cavity resonators :

1. At high frequencies, the electromagnetic cavity resonator replaces the lumped-parameter $R-C$ resonant circuit.
2. A thin coating of silver is more than sufficient for the inner walls of the cavity to compensate the losses due to the skin effect.
3. The Q factor of the cavity is of the order of 10000 and above.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

51. Consider the following statements regarding CMOS fabrications :

1. *n*-well CMOS circuits are superior to *p*-well because of the lower substrate bias effects on transistor threshold voltage and inherently lower parasitic capacitances associated with source and drain regions.
2. Latch-up problems can be considerably reduced by using a low-resistivity epitaxial *p*-type substrate as the starting material, which can subsequently act as a very low-resistance ground plane to collect substrate currents.
3. The twin-tub fabrication process allows separate optimization of the *n*- and *p*-transistors.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

52. Consider the following statements regarding CMOS and bipolar technologies :

1. Bipolar technologies are having high delay sensitivity to load as compared to CMOS technologies.
2. CMOS technologies are having low drive current as compared to bipolar technologies.

3. CMOS technologies are having low power dissipation as compared to bipolar technologies.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

53. Which one of the following approaches is used to reduce the area per bit requirement which basically consists of a capacitor C_m , which can be charged during 'write' from the 'read/write' line, provided that the 'row select' line is Hi?

- (a) One-transistor cell
- (b) Two-transistor RAM cell
- (c) Three-transistor RAM cell
- (d) Six-transistor cell

54. The microprocessor Zilog Z8000 is a/an

- (a) 8-bit microprocessor
- (b) 16-bit microprocessor
- (c) 32-bit microprocessor
- (d) 64-bit microprocessor

55. The execution of ORI instruction requires
- 2 M-cycles and 7 T-states
 - 2 M-cycles and 10 T-states
 - 3 M-cycles and 7 T-states
 - 3 M-cycles and 10 T-states

56. Which one of the following instructions in 8085 microprocessor does **not** affect any flag?
- RLC
 - PUSH
 - ORI
 - INR

57. Consider the following statements regarding RISC processor :
- The number of instructions is less than 400.
 - The number of addressing modes is more than 3.
 - Memory is accessed only by Load and Store instructions.

Which of the above statements are **not** correct?

- 1 and 2 only
- 1 and 3 only
- 2 and 3 only
- 1, 2 and 3

58. Consider the following statements regarding MC68HC11 microcontroller :
- It has 40 I/O lines with multiple functions.
 - It has two operating modes.

- It has 8k bytes of ROM and 512 bytes of EEPROM.

Which of the above statements are correct?

- 1 and 2 only
- 1 and 3 only
- 2 and 3 only
- 1, 2 and 3

59. The Z-transform of $x(n) = -a^n u(-n-1)$ is

(a) $-\frac{1}{1-az^{-1}}$; ROC is $|z| < |a|$

(b) $-\frac{1}{1-az^{-1}}$; ROC is $|z| > |a|$

(c) $-\frac{z^{-1}}{1-az^{-1}}$; ROC is $|z| < |a|$

(d) $-\frac{1}{1-(az)^{-1}}$; ROC is $|z| < |a|$

60. The inverse Z-transform of $X(z) = \log(1+az^{-1})$ with ROC $|z| > |a|$ is

(a) $x(n) = \begin{cases} (-1)^n \frac{a^n}{n}, & n \geq 1 \\ 0, & n \leq 0 \end{cases}$

(b) $x(n) = \begin{cases} (-1)^n \frac{a^{n+1}}{n}, & n \geq 0 \\ 0, & n \leq -1 \end{cases}$

(c) $x(n) = \begin{cases} (-1)^{n+1} \frac{a^{n+1}}{n}, & n \geq 0 \\ 0, & n \leq -1 \end{cases}$

(d) $x(n) = \begin{cases} (-1)^{n+1} \frac{a^n}{n}, & n \geq 1 \\ 0, & n \leq 0 \end{cases}$

61. Consider the following statements regarding Z-transform :

1. The ROC of anti-causal signal is the interior of a circle of some radius r_1 .
2. If $x(n)$ is anti-causal, then $x(0) = \lim_{z \rightarrow \infty} X(z)$.
3. The ROC of correlation of two sequences $x_1(n)$ and $x_2(n)$ is at least the intersection of the ROC of $X_1(z)$ and $X_2(z^{-1})$.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

62. Consider the following statements regarding FIR filters :

1. FIR filters are sometimes called moving-average filters.
2. Because of the linear-phase requirements, the zeros of the transfer function must lie inside the unit circle in the z-plane.
3. The linear-phase characteristic makes the time delay of the filter equal to half its length, which may be large.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

63. Consider a multimode step-index optical fiber that has a core radius of $25 \mu\text{m}$, a core index of 1.48 and an index difference $\Delta = 0.01$. What is the V-number at an operating wavelength of 840 nm?

- (a) 39
- (b) 76
- (c) 42
- (d) 16.89

64. Match the following Lists :

List-I

List-II

P. Perigee

1. It is the point on the orbit that is nearest to the center of the Earth.

Q. Eccentricity

2. It is the point on the satellite orbit that is at the farthest distance from the center of the Earth.

R. Semi-major axis

3. It is the ratio of the distance between the center of the ellipse and the center of the Earth to the semi-major axis of the ellipse.

S. Apogee

4. It is a geometrical parameter of an elliptical orbit.

Select the correct answer using the code given below.

- | | | | | |
|-----|---|---|---|---|
| (a) | P | Q | R | S |
| | 2 | 3 | 4 | 1 |
| (b) | P | Q | R | S |
| | 1 | 3 | 4 | 2 |
| (c) | P | Q | R | S |
| | 2 | 4 | 3 | 1 |
| (d) | P | Q | R | S |
| | 3 | 2 | 4 | 1 |

65. An Earth station antenna having a maximum gain of 60 dB at the operational frequency is fed from a power amplifier generating 10 kW. If the feed system has a loss of 2 dB, what is the Earth station EIRP?

- (a) 98 dB
- (b) 110 dB
- (c) 48 dB
- (d) 40 dB

66. Consider the following statements related to optical fiber :

1. Multimode step-index fibers are ideally suited for high-bandwidth, very long-haul applications.
2. Single-mode fibers are generally used on lower bandwidth, shorter haul applications using single-mode injection lasers.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

67. Match the following Lists :

List-I

List-II

- | | |
|-------------------------------------|--------------------------------------|
| P. Virtual circuit packet switching | 1. No dedicated path |
| Q. Datagram packet switching | 2. Fixed bandwidth |
| R. Circuit switching | 3. Route established for each packet |

Select the correct answer using the code given below.

- (a) P Q R
2 3 1
- (b) P Q R
1 2 3
- (c) P Q R
1 3 2
- (d) P Q R
3 2 1

68. Consider the following statements related to CDMA :

1. Because spread spectrum is obtained by the use of noise-like signals, where each user has a unique code, privacy is inherent.
2. The signals closer to the receiver are received with less attenuation than the signals farther away.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

69. If A and B choose $p = 47$, $g = 3$, and A picks a random number $x = 8$ and B picks a random number $y = 10$, what are the secret keys for A and B, respectively, using the Diffie-Hellman key exchange algorithm?

- (a) 4, 4
- (b) 4, 3
- (c) 3, 4
- (d) 3, 3

70. Which one of the following is the CRC code for the data word 110101010 using the divisor 10101?

- (a) 1011010101011
- (b) 1101010101001
- (c) 1001010101011
- (d) 1101010101011

71. A host is connected to 16 synchronous terminals through a pair of statistical time-division multiplexers utilizing the bit-map multiplexing. The sixteen asynchronous terminal ports operate at 1200 bps. The line port has a bit rate of 9600 bps. The data link control protocol is HDLC. What are the maximum line utilization efficiency and throughput, respectively?

- (a) 0.268 and 1000 bps
- (b) 0.696 and 1280 bps
- (c) 0.696 and 6678 bps
- (d) 0.346 and 128 bps

72. The bandwidth of QASK signal is

- (a) $B = 2f_b N$
- (b) $B = 2f_b / N$
- (c) $B = f_b N$
- (d) $B = f_b / N$

73. CSMA stands for

- (a) Complementary Semiconductor Multiple Access
- (b) Complementary Sense Multiple Access
- (c) Complete Sense Multimode Access
- (d) Carrier Sense Multiple Access

74. The attenuation in optical communication is usually expressed in decibels per unit length as

- (a) $10 \log_{10} \frac{P_i}{P_o}$
- (b) $20 \log_{10} \frac{P_i}{P_o}$
- (c) $10 \log_{10} \frac{P_o}{P_i}$
- (d) $20 \log_{10} \frac{P_o}{P_i}$

75. Match the following Lists :

<i>List-I</i>	<i>List-II</i>
P. IP layer	1. Transmission of bits
Q. TCP/UDP layer	2. Network layer of the OSI reference model
R. TCP/IP	3. Transport layer of the OSI reference model
S. Physical layer	4. Application layer of the OSI reference model

Select the correct answer using the code given below.

- (a) P Q R S
2 3 4 1
- (b) P Q R S
1 3 4 2
- (c) P Q R S
2 4 3 1
- (d) P Q R S
3 2 4 1

76. Consider the following statements regarding semiconductors :

1. At room temperature, there are approximately 1.5×10^{10} free carriers in a cubic centimeter of intrinsic silicon material.
2. The free electrons in the intrinsic material are only due to the natural causes and are referred to as intrinsic carriers.
3. The ratio of the number of carriers in germanium to that of silicon is greater than 10^5 .

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

77. Consider the following statements regarding semiconductor diodes :

1. PIV ratings for silicon diodes can be in the neighborhood of 400 V, whereas the maximum value for germanium is closer to 600 V.
2. Silicon can be used for applications in which the temperature may rise to about 300 °C.
3. Germanium has a much lower maximum rating (100 °C).

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

78. In P-N junction diode, the factor r_B (resistance of the semiconductor material itself and the resistance introduced by the connection between the semiconductor material and the external metallic conductor) can range from typically

- (a) 0.01 Ω for high-power devices to 0.20 Ω for some low-power, general-purpose diodes
- (b) 0.01 Ω for high-power devices to 0.40 Ω for some low-power, general-purpose diodes
- (c) 0.10 Ω for high-power devices to 0.20 Ω for some low-power, general-purpose diodes
- (d) 0.10 Ω for high-power devices to 2.00 Ω for some low-power, general-purpose diodes

79. Consider the following statements regarding transistor amplifier :

1. Current gain increases with increase in temperature.
2. $|V_{BE}|$ (base-emitter voltage) decreases about 100 mV per degree Celsius increase in temperature.
3. Reverse saturation current doubles in value for every 10 °C increase in temperature.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

80. Consider the following statements regarding transistors :

1. Networks that are quite stable and relatively insensitive to temperature variations have high stability factors.
2. Higher the stability factor, more sensitive is the network to variations in that parameter.
3. For the emitter-bias configuration, the stability factor $S(I_{CO}) = \beta + 1$ (for $R_B/R_E \gg \beta + 1$).

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

81. Consider the following statements regarding JFET :

1. The level of V_{GS} that results in $I_D = 0$ mA is defined by $V_{GS} = V_P$.
2. In ohmic region, JFET can actually be employed as a variable resistor.
3. In n -channel JFET, for all levels of V_{GS} between 0 V and the pinch-off level, the current I_D will range between I_{DSS} (maximum current) and 0 A, respectively.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

82. The efficiency of a class B amplifier for a supply voltage of $V_{CC} = 24$ V with peak output voltage of $V_L(p) = 6$ V is

- (a) 17.23%
- (b) 19.63%
- (c) 24.35%
- (d) 72.00%

83. Consider the following statements regarding clamper circuit :

1. The network must have a capacitor, a diode and a resistive element, but it can also employ an independent DC supply to introduce an additional shift.
2. The total swing of the output is equal to the total swing of the input signal.
3. During the period when the diode is in the 'on' state, the capacitor will hold on to its established voltage level.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

84. Consider the following statements regarding MOSFETs/VMOS FETs :

1. Compared with commercially available planar MOSFETs, VMOS FETs (Vertical Metal-Oxide-Silicon FETs) have reduced channel resistance levels and higher current and power ratings.
2. VMOS FETs have a negative temperature coefficient that will combat the possibility of thermal runaway.
3. The reduced charge storage levels result in faster switching times for VMOS construction compared to those for conventional planar construction.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

85. Consider the following statements regarding MOSFETs :

1. For the values of V_{GS} less than the threshold level, the drain current of an enhancement-type MOSFET is 0 mA.

2. For the levels of $V_{GS} \leq V_T$, the drain current is related to the applied gate-to-source voltage by the non-linear relationship

$$I_D = k(V_{GS} - V_T)^2$$

3. The k term is a constant that is a function of the construction of the device. The value of k can be determined from the equation

$$k = \frac{I_{D(on)}}{(V_{GS(on)} - V_T)^2}$$

where $I_{D(on)}$ and $V_{GS(on)}$ are the values for each at a particular point on the characteristics of the device.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

86. If the input voltages of an op-amp are $V_{i1} = 150 \mu\text{V}$, $V_{i2} = 140 \mu\text{V}$, the differential gain is 4000 and CMRR is 100, then the output voltage is

- (a) 26.4 mV
- (b) 40.0 mV
- (c) 45.8 mV
- (d) 68.2 mV

87. An inverting amplifier using op-amp is having $R_F = 150 \text{ k}\Omega$ and $R_1 = 2 \text{ k}\Omega$. The offset voltage for the op-amp specification listing $I_{IO} = 100 \text{ nA}$ is

(a) 0.2 mV

(b) 7.5 mV

(c) 7.6 mV

(d) 15 mV

88. Among two cubes, the first one has a length of $L \text{ m}$, while the second one has a length of $2L \text{ m}$. What is the ratio of the conductivities of the materials of the cubes so that the resistance between any two faces of one cube is same as that of the other cube?

(a) $1/2$

(b) 1

(c) $3/2$

(d) 2

89. A resistor is made up of alloy 1 dissipating 50 W of electrical power at 110 V at 20°C . Another resistance of alloy 2 is made having the same resistance as the first resistor but consuming double amount of the power of the first one. If the temperature remains constant during the entire process, then the current flowing through alloy 2 resistor at 20°C is

(a) 0.231 A

(b) 0.643 A

(c) 1.321 A

(d) 1.623 A

90. Consider the following statements regarding DC network analysis :

1. A voltage source with a parallel resistance can be converted into a current source with a series resistance.
2. A constant current source of I and a parallel resistance R can be converted into a constant voltage source of voltage $V (= IR)$ and a resistance R in series with it.
3. Dependent sources are parts of models which are used to represent electrical properties of electronic devices.

Which of the above statements are correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

91. The Curie temperature of nickel (Ni) metal is

- (a) 298 °C
- (b) 358 °C
- (c) 770 °C
- (d) 1120 °C

92. Consider the following statements regarding electromagnetic induction :

1. Whenever magnetic flux linked with a closed coil changes, an induced EMF is set up in the coil and the induced EMF lasts as long as the change in magnetic flux continues.
2. The magnitude of the induced EMF is proportional to the rate of change of magnetic lines of force.
3. Lenz's law states that the direction of the induced current is such that it opposes the very cause producing this current.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

93. A current of 10 A when flowing through a coil of 2000 turns establishes a flux of 0.6 milliweber. The inductance of the coil is

- (a) 0.12 H
- (b) 0.72 H
- (c) 1.08 H
- (d) 1.32 H

94. Consider the following statements regarding autotransformer :

1. Voltage regulation of an autotransformer is better because of reduced voltage drop in the resistance and reactance.
2. An autotransformer has variable output voltage, when a sliding contact is used for the secondary.
3. Short-circuit current is larger for an autotransformer due to reduced internal impedance.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

95. Consider the following statements regarding transformer cooling methods :

1. In air blast cooling method of transformers, continuous blast of filtered air is forced through the core and windings for better cooling.
2. In oil blast cooling, forced air is passed over cooling elements of transformer immersed in oil.
3. In forced oil and water cooling, metallic tubes are situated inside the tank, below the oil level. Water is circulated through these tubes to extract heat from oil.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

96. Consider the following statements regarding DC machines :

1. Commutation is the process of producing a unidirectional or direct current from the alternating current generated in the armature coil.
2. The main cause of sparking at the commutator being the reactance voltage, it can be minimized by using high-resistance carbon brushes.

3. Armature reaction AT (Ampere-turns) in DC machines can be compensated by placing a compensating winding in the pole faces with its axis along the brush axis and excited by the armature current in series connection, so that it causes cancellation of armature reaction AT at all values of armature current.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

97. Consider the following statements regarding electric circuits :

1. A 60% lagging power factor implies an inductive load in which the supply current lags the voltage by an angle with a cosine of 0.6 (i.e., by approximately 53°).
2. A 90% leading power factor would indicate a capacitive load in which the voltage leads the current by an angle with a cosine of 0.9 or approximately 26° .
3. When the phase angle (angle between supply voltage and current) is zero, then all of the apparent power from the supply is dissipated as true power in the load.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

98. Consider the following statements regarding Blondel's theorem for measurement of power in a polyphase system :

1. If a network is supplied through N conductors, the total power is measured by summing the reading of N wattmeters so arranged that a current element of a wattmeter is in each line and corresponding voltage element is connected between that line and a common point.
2. If the common point is located on one of the lines, then the power may be measured by $(N - 1)$ wattmeters.
3. The most common applications of Blondel's theorem include the two-wattmeter method of measurement of power in 3-phase, 3-wire load circuits and three-wattmeter method of measurement of power in 3-phase, 4-wire load circuits.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

99. Consider the following statements regarding cells and batteries :

1. A manganese-alkaline cell can sustain a constant terminal voltage for heavy loads over a much longer period of time than the less expensive zinc-carbon cell.
2. The major advantage of manganese-alkaline cell is that its terminal voltage is maintained constant for much longer periods than either the mercury or zinc-carbon cells.

3. The mercury cell is a modification of the zinc-carbon cell, in which mercuric oxide is used as the negative electrode.

Which of the above statements are *not* correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

100. A battery with a rating of 300 Ah is to be charged. If the internal resistance of the battery is 0.008Ω , the safe maximum charging current of the battery is 37.5 A and its (discharged) terminal voltage is 11.5 V, then the initial output voltage level for the battery charger is

- (a) 11.8 V
- (b) 12.4 V
- (c) 13.5 V
- (d) 15.0 V

101. Consider the following statements regarding polymers :

1. Elastomers are better known as rubbers.
2. Isomers are variations in the molecular structure of the same composition.
3. Polymers contain non-metallic elements sharing electrons to build up small molecules, called micro-molecules.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

102. Consider the following statements regarding structure of materials :

1. The number of nearest neighbors around an atom is known as coordination number.
2. For body-centred cubic structure, the coordination number is 8.
3. For close-packed hexagonal structure, the coordination number is 16.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

103. Consider the following statements regarding structure of materials :

1. Crystalline solids whether pertaining to a metal or non-metal may have more than one crystal structure. This phenomenon is known as polymorphism.
2. Cobalt exists as an FCC lattice at low temperatures and as an HCP one at high temperatures.
3. Strontium exists as an HCP lattice at low temperatures and as an FCC one at high temperatures.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

104. The atomic stacking sequence in the close-packed hexagonal crystal structure is

- (a) AAAA.....
- (b) ABAB.....
- (c) ABCA.....
- (d) BBBB.....

(where A, B, C represent the close-packed places)

105. Consider the following statements regarding AX-type compounds :

1. The crystal lattice of an ionic compound depends on the size of the ions, but not on their valency.
2. NaCl is a simple compound of AB-type, but the unit cell size is affected by the large chlorine atoms.
3. Silicon carbide has the diamond cubic structure, where each silicon atom is bonded to four carbon atoms and vice versa.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

106. Consider the following statements regarding ceramic materials :

1. Refractories are special ceramic materials of construction capable of withstanding high temperature in various industrial processes and operations.
2. Castable refractories have been used in applications where abrasion resistance at elevated temperature is required and as a protective barrier against corrosive attack by hot gases and liquids that are highly detrimental to other structural materials.
3. Mullite refractories are prepared by fusing alumina and silica materials in any required proportion or by calcining sillimanite, a naturally occurring mineral of the composition $\text{Al}_2\text{O}_3 \cdot \text{SiO}_2$.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

107. Consider the following statements regarding physical properties of materials :

1. Thermal conductivity of tantalum is more than tungsten.
2. Thermal expansion is more in tin as compared to lead.
3. Electrical conductivity of beryllium is better than graphite.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

108. The net magnetic moment per atom for ferromagnetic metal Ni is

- (a) 0.6
- (b) 1.7
- (c) 2.2
- (d) 5.0

in Bohr magneton.

109. Consider the following statements regarding magnetic properties of materials :

1. Anti-ferromagnetism arises from an anti-parallel locking spin, which results in a negative interaction between the nearest neighbors.
2. When the magnetic moments are equal, the anti-parallel arrangement results in ferrimagnetism.
3. Cu_2MnAl is an example of ferromagnetic material.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

110. Consider the following statements regarding ferromagnetic materials :

1. Soft magnetic materials have low permeability.
2. Soft magnetic materials have low coercive force.
3. Hard magnetic materials are used for their ability to retain magnetic fields.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

111. Consider the following statements regarding superconductivity :

1. Metals and compounds, which lose their electrical resistivity at absolute zero temperature, are called superconductors.
2. The superconducting state can be destroyed by the application of an external magnetic field.
3. The materials which become superconductors are not necessarily good conductors, when they are normal metals.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

112. At absolute zero, the band gap in a superconductor in terms of Boltzmann's constant (k) and critical temperature (T) is

- (a) $1.5 kT$
- (b) $2.5 kT$
- (c) $3.5 kT$
- (d) $4.5 kT$

113. Consider the following statements regarding electrical measurements :

1. Accuracy of the instruments is defined as conformity with an accepted standard value.
2. Accuracy of an instrument is influenced by reproducibility.
3. Accuracy of an instrument is influenced by dead zone.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

114. A thermometer reads 92.5°C and the static correction given in the correction curves is -0.75°C . The true value of the temperature is

- (a) 91.00°C
- (b) 91.75°C
- (c) 93.25°C
- (d) 94.00°C

115. Consider the following statements regarding drift :

1. An instrument is said to have no drift, if it reproduces same reading at different times for same variation in measured variable.
2. Drift occurs in resistance thermometers due to the contamination of the metal and a change in its atomic or metallurgical structure.
3. Drift may occur in flowmeter due to wear and erosion of the orifice plate, nozzle or venturimeter.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

121. Consider the following statements regarding dynamic characteristics of a measurement system :

1. In retardation-type measuring lag, the response of the measurement system begins after a dead time after the application of input.
2. Fidelity is defined as the degree to which a measurement system indicates changes in the measured quantity without any dynamic error.
3. Measurement error is the difference between the true value of the quantity changing with time and the value indicated by the measurement system if no static error is assumed.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

122. The minimum and maximum ranges of temperature of tungsten used in resistance thermocouple are, respectively

- (a) -100°C and 300°C
- (b) -220°C and 300°C
- (c) -200°C and 1000°C
- (d) -260°C and 1100°C

123. Consider the following statements regarding wattmeters :

1. In pivoted-coil direct-indicating wattmeters, the fixed coil is wound in two halves, which are placed parallel to another at such a distance that the uniform field is obtained.
2. Suspended-coil torsion wattmeters are commonly used as switchboard or portable instruments.
3. In pivoted-coil direct-indicating wattmeters, the eddy current errors within the region of magnetic field of the instrument are minimized by the use of non-metallic parts of high-resistivity material.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

124. Consider the following statements regarding dynamometer wattmeters :

1. Dynamometer wattmeters comparatively consume more power than induction wattmeters.
2. Dynamometer wattmeters can be used for both AC and DC systems.
3. Dynamometer wattmeters provide high degree of accuracy if carefully designed.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

125. Consider the following statements regarding Cathode Ray Oscilloscope (CRO) :

1. Cathode is a nickel cylinder coated with an oxide coating of barium and strontium, and emits plenty of electrons, when heated.
2. The typical values of current and voltage required by an indirectly heated cathode are 800 mA at 6.5 V (AC or DC).
3. The control grid is usually a metal cylinder covered at one end but with a small hole in the cover.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

126. Consider the following statements regarding graph theory :

1. Chord is that branch of the graph that does not belong to the particular tree.
2. Cut-set is a unique set with respect to a given tree of a connected graph containing one chord and all of the free branches contained in the free path formed between two vertices of the chord.

3. If M represents the number of branches and N the number of nodes, the minimum number of variables involved in analyzing a network is equal to $(M + N - 1)$.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

127. The incidence matrix of the graph shown below is

$$(a) \begin{bmatrix} 1 & 0 & 0 & 0 & 1 \\ -1 & 1 & 0 & 1 & 0 \\ 0 & -1 & 1 & 0 & 0 \\ 0 & 0 & -1 & -1 & -1 \end{bmatrix}$$

$$(b) \begin{bmatrix} 1 & 0 & 0 & 0 & -1 \\ -1 & 1 & 0 & 1 & 0 \\ 0 & -1 & 1 & 0 & 0 \\ 0 & 0 & -1 & -1 & -1 \end{bmatrix}$$

$$(c) \begin{bmatrix} 1 & 0 & 0 & 0 & 1 \\ -1 & -1 & 0 & 1 & 0 \\ 0 & -1 & 1 & 0 & 0 \\ -1 & 0 & -1 & 1 & -1 \end{bmatrix}$$

$$(d) \begin{bmatrix} -1 & 0 & 0 & 0 & 1 \\ -1 & -1 & 0 & 1 & 0 \\ 0 & -1 & 1 & 0 & 0 \\ -1 & 0 & -1 & -1 & 0 \end{bmatrix}$$

128. Consider the following statements regarding circuit theory :

1. The algebraic sum of the row entries of an incidence matrix is zero.
2. The determinant of the incidence matrix of a closed loop is zero.
3. A fundamental tie-set of a graph with respect to a tree is a loop formed by only one link associated with other twigs.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

129. What is the value of α for the given circuit, when the power loss in $1\ \Omega$ resistor is 9 W ?

- (a) 2.67
- (b) 3.67
- (c) 4.33
- (d) 5.33

130. What is the expression for $I_1(s)$ for the two-mesh network given below, when the switch is closed [assuming the initial condition $i(0^+)$ is zero through the inductance]?

- (a) $I_1(s) = \frac{V}{s} \left[\frac{R_1(R_2 + sL)}{R_1 + R_2 + sL} \right]$
- (b) $I_1(s) = \frac{V}{s} \left[\frac{R_1 R_2 + sL}{R_1 + R_2 + sL} \right]$
- (c) $I_1(s) = \frac{V}{s} \left[\frac{R_1 + R_2 + sL}{R_1(R_2 + sL)} \right]$
- (d) $I_1(s) = \frac{V}{s} \left[\frac{R_1 R_2 + sL}{R_1(R_2 + sL)} \right]$

131. Consider the following statements regarding circuit theory :

1. A passive network does not contain any source of energy and the input port serves as load terminal.
2. Physically separate network elements like R , L or C are known as lumped elements.
3. When a large circuit consists of similar networks connected one after another, the network is called recurrent network.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

132. Consider the following statements regarding circuit theory :

1. In asymmetrical π section network configuration, the shunt arm impedances are not identical.
2. A balanced form of π network is also known as 'O' section.
3. L section is merely a specific case of the asymmetrical π section with one shunt arm equal to zero.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

133. Hybrid parameter h_{21} is called

- (a) input impedance
- (b) forward current gain
- (c) reverse voltage gain
- (d) output admittance

134. The two-port network will be reciprocal if

- (a) $h_{12} = h_{21}$
- (b) $Y_{12} = -Y_{21}$
- (c) $Z_{12} = -Z_{21}$
- (d) $AD = 1 + BC$

135. Consider the following statements regarding two-port network :

1. A network is termed to be reciprocal, if the ratio of the response variable to the excitation variable remains identical even if the positions of the response and excitation in the network are interchanged.
2. A two-port network is said to be symmetrical, if the input and output ports can be interchanged even after altering the port voltages and currents.
3. The condition for symmetry is $Z_{11} = -Z_{22}$.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

136. Consider the following relations for two-port network :

$$1. A = \left(\frac{h_{11}h_{22} - h_{12}h_{21}}{h_{21}} \right)$$

$$2. h_{22} = \left(\frac{Y_{11}Y_{22} - Y_{12}Y_{21}}{Y_{21}} \right)$$

$$3. h_{12} = \left(\frac{AD - BC}{D} \right)$$

Which of the above relations are **not** correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

137. Consider the following statements regarding two-port network :

1. The overall Z -parameter matrix for series-connected two-port networks is simply the sum of Z -matrices of each individual network.
2. The overall Y -parameter matrix, if two networks A and B are connected in parallel, is simply the summation of Y -matrices of each individual two-port network.
3. The overall $ABCD$ -parameter network matrix for the cascade-connected two-port network is the matrix product of $ABCD$ -matrices of each individual two-port network.

Which of the above statements are correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

138. Consider the following statements regarding small signal model of BJT :

1. The use of r_e -model for AC analysis of transistor does not provide exact analysis.
2. The use of h -parameter model as an equivalent circuit of transistor provides exact analysis.
3. In h -parameter model, h_{12} is referred to as short-circuit current gain.

Which of the above statements are **not** correct?

(a) 1 and 2 only

(b) 1 and 3 only

(c) 2 and 3 only

(d) 1, 2 and 3

139. A BJT is operating at a base current of $7.6 \mu\text{A}$ and β_0 (AC common-emitter forward short-circuit current gain in hybrid- π model) of 104. Assume $V_T = 25 \text{ mV}$. The value of transconductance at room temperature ($T = 293 \text{ K}$) is

(a) 0.304 mA/V

(b) 1.826 mA/V

(c) 31.60 mA/V

(d) $790.40 \mu\text{A/V}$

140. Consider the following statements regarding rectifier circuits :

1. The transformer needed for the bridge rectifier over the full-wave rectifier is lighter in weight.
2. The Peak Inverse Voltage (PIV) of each diode used in the bridge rectifier is V_{\max} , whereas it is $2V_{\max}$ for the full-wave rectifier.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

141. Consider the following statements regarding transistors :

1. FETs are less temperature stable compared to BJTs.
2. FET is a current-controlled device whereas BJT is a voltage-controlled device.
3. FET has zero offset voltage at zero drain current, hence it makes an excellent signal chopper.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

142. Consider the following statements regarding biasing in transistors :

1. The DC analysis for FET is slightly simple as compared to BJT due to the linear relationship between input and output quantities.
2. Fixed bias arrangement of JFET has the disadvantage that it uses a separate supply for biasing.

3. It is essential to establish an appropriate DC operating point for the BJT, when it is used as an amplifier.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

143. Consider the following statements regarding field-effect transistor :

1. MOSFETs provide very low input impedance compared to JFET.
2. A depletion-type MOSFET can be used both with V_{GS} positive and negative, i.e., enhancement and depletion mode, respectively.
3. FET should be biased in the saturation region in order to be used as an amplifier.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

144. What is the cutoff frequency of a first-order low-pass filter for $R_1 = 1.2 \text{ k}\Omega$ and $C_1 = 0.02 \mu\text{F}$?

- (a) 3.31 kHz
- (b) 6.63 kHz
- (c) 7.96 kHz
- (d) 13.26 kHz

145. If a 6-bit DAC has a step size of 50 mV, then the full-scale output voltage and percentage resolution are, respectively

- (a) 300 mV and 3.174%
- (b) 3 V and 1.587%
- (c) 3.15 V and 1.587%
- (d) 6.30 V and 3.174%

146. Consider the following statements regarding A/D and D/A converters :

1. The settling time of a DAC is the time taken by its output to settle down to within ± 0.7 step size of its final value after the application of the digital input.
2. The step size of DAC is the same as the proportionality factor in the DAC I/O relationship.
3. The dual-slope ADC is also called the continuous-conversion type ADC.

Which of the above statements are **not** correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

147. The simplified form of the Boolean function

$$F(A, B, C, D) = A\bar{B}C + B + B\bar{D} + AB\bar{D} + \bar{A}C$$

is

- (a) $B + C$
- (b) $A(B + C)$
- (c) $B + D$
- (d) B

148. The simplest possible POS form of

$$F(A, B, C, D, E) = \sum m(6, 9, 13, 18, 19, 25, 27, 29, 31) + d(2, 3, 11, 15, 17, 24, 28)$$

is

- (a) $(B + E)(\bar{B} + \bar{C}D)(\bar{A} + \bar{B} + D\bar{E})$
- (b) $(\bar{B} + \bar{E})(B + C + \bar{D})(A + B + \bar{D} + E)$
- (c) $(D + E)(\bar{B} + E)(A + B + \bar{E})(\bar{A} + B + \bar{C})$
- (d) $(D + E)(\bar{B} + E)(A + B + \bar{E})(\bar{A} + B + \bar{C})(B + E)$

149. Consider the following statements regarding Boolean functions :

1. Each one of the product terms in the canonical SOP form is called a minterm.
2. Two squares in K-map are said to be adjacent to each other, if their min (max) terms differ in only one variable.
3. The binary number designations of the rows and columns of K-map are in Gray code.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

150. Consider the following statements regarding combinational circuits :

1. A ripple carry adder is a parallel adder in which the carry-out of each full-adder is the carry-in to the next most significant adder.
2. Look-ahead carry adder speeds up the process by eliminating the end carry.
3. A priority encoder is a logic circuit that responds to just one input, in accordance with some priority system, among those that may be simultaneously HIGH.

Which of the above statements are correct?

- (a) 1 and 2 only
- (b) 1 and 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3
